PROOF STATEMENT

"I build and deploy production-ready ML/AI systems — from deep learning models to intelligent pipelines — that solve real-world problems."

One Person: Hiring manager / startup CTO | One Action: [Hire me / reach out](#)

01 · HERO

/ Home

- Bold claim headline
- 3-word descriptor (ML · Vision · NLP)
- "See my work" CTA button
- Current status badge (Open to work)

✓ States the claim immediately

02 · WORK

/work Case Studies

- NOOR — Recidivism Risk Model
- NeuroScan AI — Alzheimer's MRI
- JIGSAWS Skill Assessment
- SWAG Surgical Pipeline
- FlyRank SEO-ML Internship

✓ Proves the claim with real work

03 · ABOUT

/about Who I Am

- BSCS Sem 6, MUST Multan
- FlyRank ML Intern
- Stack: PyTorch · Streamlit · HF
- 2-3 lines, no fluff

✓ Answers "can I trust this person?"

04 · ACTION

/contact Get in Touch

- Email form (one field)
- GitHub link
- LinkedIn link
- Response time promise

✓ The one action — hire/reach out

EVERY PAGE POINTS TO

→ "Let's work together" / Hire Me

4 pages only. No blog. No testimonials. No extras.

Pages NOT included (and why): Blog (no proof yet), Testimonials (not needed at student stage), Services page (not freelancing, hiring-focused), Resume page (PDF link from /contact is enough). Each of the 4 pages earns its place: Hero states the claim → Work proves it → About builds trust → Contact enables the action.

Sitemap: 4 pages only — Home → Work → About → Contact. Every page exists to move the visitor toward one action: hire/reach out.

Sitemap Rationale — Every Page Earns Its Place

Against the claim and the one action

#	Page	Role	Content	Why it earns its place
0 1	Home /	Hero — States the claim	Bold headline with proof statement. 3-word descriptor (ML · Vision · NLP). Single CTA button → Work.	<i>Without this, visitor doesn't know what I do in 5 seconds. Earns place: yes.</i>
0 2	Work /work	Case Studies — Proves the claim	5 projects: NOOR, NeuroScan AI, JIGSAWS, SWAG, FlyRank Internship. Each with problem → method → result.	<i>This is the proof. Every project maps directly to the proof statement. Earns place: yes.</i>
0 3	About /about	Short bio — Builds trust	BSCS Sem 6 MUST, FlyRank ML Intern, stack (PyTorch · HF · Streamlit). 2–3 lines max, no fluff.	<i>Answers 'can I trust this person?' before they email. Earns place: yes.</i>
0 4	Contact /contact	Action — The one action	Email form (one field), GitHub + LinkedIn links, response time promise.	<i>This IS the one action. Without it, no hire happens. Earns place: yes.</i>

Pages deliberately excluded:

Page	Why excluded
Blog	No proof yet — would dilute the signal
Testimonials	Student stage — not needed, would look padded
Services	Not freelancing; this is a hiring portfolio
Resume page	PDF link from /contact is sufficient
Skills page	Skills show through case studies, not a list

Claude Project — Configured Screenshot

Project: Portfolio Builder — ML/AI Engineer · Tutor mode active · 8-week build track

The screenshot below shows the configured Claude Project with custom instructions: proof statement, one person, one action, all 5 proof projects, tech stack, and tutor rules — pasted in as genuine instructions, not defaults.

Pressure-Test Prompt + Claude Output

Week 01 · Real prompt run against the sitemap · One change noted

PROMPT SENT TO CLAUDE

Here is my portfolio sitemap: Home (hero + claim), Work (5 case studies), About (short bio), Contact (email form + GitHub + LinkedIn). My proof statement is: 'I build and deploy production-ready ML/AI systems — from deep learning models to intelligent pipelines — that solve real-world problems.' My one person is a hiring manager or startup CTO. My one action is: they email me to hire. Pressure-test this sitemap. Does every page earn its place? Is anything missing that would block the one action? Is anything there that shouldn't be?

CLAUDE OUTPUT (pressure-test)

Overall verdict: Your sitemap passes the minimum bar. Four pages, clear flow, one action at the end. That's good discipline for a week-one sketch.

Home — passes. Your headline states the claim. One CTA button is right. But 'production-ready ML/AI systems' is doing a lot of work — make sure the headline on the actual page is specific enough that a CTO in 5 seconds knows whether you're vision, NLP, or pipelines. Right now it covers all three; that's fine at sketch stage, but you'll need to tighten it in week two.

Work — this is your strongest page. Five real projects is credible. The risk: case studies often describe what was built, not what problem it solved or what result it achieved. When you write the case study copy, lead with the problem and the outcome, not the architecture. 'I built a ConvNeXt-CBAM model' is not proof. 'NeuroScan AI classifies Alzheimer's MRI with 94% accuracy, 3x faster than a radiologist's first screen' is proof.

About — passes, but watch the length. Two to three lines is right. Student stage means you can't pad this. One thing to add: a one-line statement of what you're looking for (e.g. 'Open to ML engineering roles — remote or Multan-based'). This pre-qualifies the action.

Contact — one flag. LinkedIn and GitHub are correct. The email form is correct. But you listed no response time promise in detail — add one ('I reply within 24 hours'). This removes friction from the action. The CTO who clicked 'Contact' is already warm; don't let them wonder if you'll reply.

What's missing: A small social-proof signal somewhere on the Work page or Home — not testimonials (you rightly excluded those), but a credibility line: 'Submitted to Pakistan Youth Incubation Competition' or 'Active ML Intern at FlyRank' next to the relevant project. One line per project. This doesn't add a page; it belongs in the case study cards.

What should not be there: Nothing in your four-page sitemap is wrong. Good restraint.

One thing I will change (required by rubric):

Add a one-line credibility signal to each Work page case study card — e.g. 'Submitted to Pakistan Youth Incubation Competition' for NOOR, and 'Active FlyRank ML Intern' for the SEO-ML project. Claude flagged that proof statements need outcomes, not just architecture descriptions. I will rewrite every case study opening line to lead with the problem solved and the measurable result, not the model name or framework used.
